Web Protection

Losing control of your network is only one click away.

It is no longer a question of if you will encounter Web-based malware, but when. Thousands of networks are compromised each day leading to untold financial and data loss. The only way to effectively protect your network from these evolving threats is through a multi-layered, adaptive solution like SecureSurf™.

Focus on your business. We'll focus on protecting it.

SecureSurf is a cloud-based Web protection service delivered at the DNS level. There is no onsite hardware or software required. A simple DNS configuration change will have your entire network protected in a matter of minutes. SecureSurf delivers enterprise level security at a price point SMBs can afford and it doesn't require a dedicated IT staff to administer.

Protection you can trust.

SecureSurf's multi-layered cloud solution combines proactive features such as firewalls, intrusion detection, anomaly alerting, log analysis, malware forensics and virus intelligence data. SecureSurf monitors both inbound and outbound traffic. If suspicious activity is detected on your network, we will block it and alert you immediately. Review tailored Network Usage & Threat Analysis reports to keep your network efficient and secure. Take an aggressive stance against malware and regain control of your network today with SecureSurf.

SecureSurf™

OUTBOUND TRAFFIC

Botnet Calls
Key Loggers
Malicious URL Requests

Analysts
Malware Forensics
Anomaly Alerting
Proprietary Threat Analysis
